

Version for plaster

Version for drywall

Practical

The Frontale model is made using two Unico models

Robust

Made from black pre-painted 10/10 sheet metal, it is simply applied on top of the two pockets and fixed quickly in place with the supplied screws.

Elegant and Functional

Our kit is lined with two plastic extrusions on both sides in the same black shade of the track that facilitate the mounting of jambs and soft-closing sliding systems.

Affordable

Much less expensive than the cost of other systems to achieve a similar result on the building site.

Accurate

It is manufactured in the correct size to fit measurement requirements, saving risky and elaborate on-site works.

Range

It comes available for all passage widths and thicknesses, both for the plaster and drywall versions, as described in our catalogue.
